

Management by exception

Management by Exception is the best way to focus efforts when you have high frequency data. TEAM Sigma HF has this automated in the improved Exception Management Activity

TEAM Sigma HF for high frequency utility data enables the energy manager to set up exemption reports on exactly what he needs to know. Exceptions can be set up against performance targets and using various analysis techniques can be ranked in order of magnitude in terms of the costs or consumption. If consumption falls outside a given tolerance limit at any time, this occurrence is highlighted as an exception, which can be viewed, emailed to site contacts, published

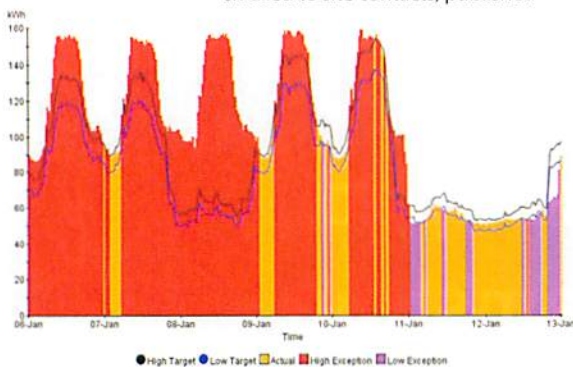

on a web site or even sent to a printer. This not only saves valuable time, but money by enabling the quick identification of waste and therefore aiding a rapid resolution of the underlying problems.

To get the most out of the Exception Management system you should schedule the different Exception Reports required such that the data is checked soon after importing. This way each day you can view a list of the most critical issues to investigate instantly without any effort.

Exceptions can be shown typically daily or weekly, based on a wide range of target criteria, filtered or sorted by type, category or even the amount of excess consumption or cost. In a similar but reversed way the TEAM Sigma HF software allows quick viewing of any significant savings made, as these are equally as important to know.

TEAM (Energy Auditing Agency) is the UK's leading supplier of utility

management solutions and services. Our systems are helping to reduce energy costs at thousands of sites across the UK and worldwide, monitoring over £1 billion of utility spend. We offer a broad portfolio of solutions with all software development undertaken in house. Customers can choose software, bespoke system development, or a full bureau service where we manage the utility data for you. Established in 1985, we have wide ranging interfaces with utility companies, meter providers and building management system suppliers, enabling us to deliver tailored solutions to match your exact requirements. With expertise in Energy Accounting systems, 7 hour data management, EDI solutions, & web-based services as well as billing, tariff analysis, and procurement systems, TEAM is the perfect utility management partner.
